

# YIKANGSU *green Oligosaccharide Feed Additive*

## **Product Description :**

Yikangsu is a new type of oligosaccharide product developed through new modern enzyme engineering technology. It is considered as one of the most stable and efficient intestinal micro-ecology regulator and immunity improver on the market. As a new type of green feed additive, Yikangsu can be applied in various feed for different ages of animals without limit, no residue, no medical resistant, no toxic and contamination.

### **Main Functions:**

- Enhance immune function, and improve resistance against diseases.
- As immunity adjuvant agent, it could enhance successful rate of immunization
- Protect liver of animal, reduce the occurrence of liver ascites
- Improve the sanitary level of corral and fowling, consequently effectively reduce Occurrence of digestive system diseases and respiratory system diseases.
- Reduce the occurrence various of diseases such as bacterial diarrhea, viral diarrhea New castle Disease, egg drop syndrome and postpartum syndrome of dairy cows.
- Enhance health levels of young animals, guarantee optimal growth speed during Later growth stage, improve animal growth performance indexes.
- Selectively stimulate the reproduction of beneficial bacteria in the gut, at the same Time restrain the breeding of harmful bacteria, consequently maintain an optimum Bacterial community environment in animal gastrointestinal tract.

### **Dosage and Usage**

<u>Animal</u>	<u>Dosage infeed</u>	<u>Dosage in drinking water</u>
Pigs	0.06 – 0.10	0.03-0.05
Poultry	0.06 – 0.10	0.03 -0.05
Milk Cows	0.08 – 0.15	0.03-0.05

**Packing and Storage:** Packed in aluminium foil 1 kg bag This product should be stored in dry, pollution-free place

**Shelf Life:** 18 months from production date
