

NuEra Nutrition Portfolio

IMMUNOWALL™ is a prebiotic additive, rich in β Glucan and Mannan oligosaccharides (MOS) derived from *Saccharomyces cerevisiae* yeast cell wall.

MOS and β Glucan are known to prevent colonization on the intestinal tract by pathogens, stimulate the immune activity of the phagocytic cells and enhance the action of beneficial bacteria.

Hydrolyzed Yeast

HILYSES™ is an additive obtained from fermentation of specific strains of *Saccharomyces cerevisiae* yeast, using a process that stimulates cell disruption through endogenous and exogenous enzyme.

The cellular disruption favours the release of nucleic acids that are further digested into nucleotides and nucleosides.

HILYSES™ has 3 way action: Immunity, Intestinal Integrity and Palatability.

STAR YEAST™ and **MAXI CELL PRO™** are inactive yeast resulted from secondary fermentation which has the property of improve significantly the animal performance indices.

Yeast combines the most favourable characteristics for use as animal feed, due to its nutritional and prophylactic characteristics. It has a high concentration of digestive enzymes, mainly glucanase and protease, which together with vitamin b complex account for increased animal performance indices.

*Prime products
for animal nutrition*

ActiveFlora™

Live Yeast (20 billion CFU/gram)

ACTIVEFLORA™ is a pure strain of a specially selected strain of *Saccharomyces cerevisiae* yeast, consisting of 20 billion live cells per gram (2.0 x 10¹⁰ CFU/g).

Specially selected strains, using genetic techniques based on desirable characteristics in the final product. It is dehydrated by sophisticated drier equipment, maximizing its cellular viability.

ZeniFIX™

Mycotoxin Binder

ZENIFIX™ is a fine, inert chalk-white powder with free flowing properties, which helps in mixing and pelletization process. **ZENIFIX™** can be used in feed for all kinds of animals (poultry, meat and dairy cows, pigs, horses, rabbits, etc) of any age or physiological condition.

Complex Yeast Selenium™

Organic Selenium - 2000ppm

COMPLEX YEAST SELENIUM™ is an inactive yeast enriched with selenium, which acts by decreasing oxidation process and consequently cells ageing.

The selenomethionine found in nature is an ideal form of selenium to be digested and metabolized by the organism, and that is the form prevailing in *Saccharomyces cerevisiae* yeast.
